

**Building Connect +** is a cloud based ready to use platform to monitor and control your CITY MULTI and third party equipment. Seamlessly connect up to 50 VRF indoor units, 5 BACnet devices and 8 other pieces of equipment using digital I/O. Remote connectivity allows you to view any number of Building Connect+ installations without the need for additional licenses or equipment. This Contractor focused integration package reduces initial costs and commissioning time through the use of a pre-programmed local broker and web based portal. Standard user friendly features include user management, alarming, scheduling, trend builder and a cloud based data hub. Pre-programmed applications like auto-changeover make this turnkey solution the simple and easy way to monitor a complete HVAC system.

Connect VRF equipment via one central controller for up to 50 CITY MULTI® indoor units.

Integrate 3rd party equipment, 5 BACnet® IP or BACnet MSTP devices with 10 selectable points and 8 hardwired devices.

Building Connect+ is a simple and secure cloud-based interface solution for Mitsubishi Electric CITY MULTI® equipment plus your 3rd party BACnet® and hardwired equipment.

The configuration wizard auto-discovers the connected CITY MULTI® and BACnet® equipment. No programming is required.

Configuration is through a simple built-in web portal for ease of use and expedited commissioning.

No special software or licenses required

## Key Features and Benefits

- ▶ Out-of-the-box cloud-based integration solution for controlling and monitoring CITY MULTI® equipment and third-party devices
- ▶ Connect multiple installations and users across varied geographic locations
- ▶ Easy installation and commissioning because it does not require any special software or tools

## Maintenance Tool Data

Full set of Mitsubishi Electric CITY MULTI maintenance tool data for monitoring, troubleshooting, and analytics.

## User Management

Multilevel user accounts to allow for different feature permissions and equipment access

## Scheduling

Weekly and Holiday scheduling of individual indoor units or the entire system for personal comfort and increased energy savings

## Trending

Data trending and downloading capabilities for system performance review and evaluation.

## Alerts

Email notifications and display for all connected equipment.

## Key Features and Functions

- ▶ Auto import functionality identifies and adds new units during startup and commissioning
- ▶ Auto Changeover application allows for users to enable and manage the settings.
- ▶ Local and remote user connectivity using computer, tablets, or mobile devices
- ▶ Global batch commands for streamlining operations
- ▶ Secure access with two-factor user authentication powered by Google Authenticator
- ▶ Intuitive graphical user interface for easy web connectivity and system configuration
